LIVING SPACE

Mobile shelving systems

For a rational storage of books, papers, files and documents, Habitat Italiana has studied "LIVING SPACE", a modern system of mobile shelving running on rails that permits a large gain of space in comparison with traditional fixed shelves. Thanks to its mobile bays, opening one single aisle, all the space inside the room is fully used.

With "living space" you can save both space and costs!!

Our mobile system permits to solve important logistic needs.

1. maximum capacity: compared with fixed shelves you can double the available space;
2. low costs: if you save space you save money;
3. safety: the whole system is protected by doors and a centralised lock;
4. fast consultation: with a simple movement of the handle you can enter the corridor.

“Living space” is made to the measure!!

Each system is realized by our Technical Department according to consumer needs.

There is also the possibility to choose lots of accessorises: end closing doors, anti dust rudder profiles, safety bars, anti fire platform, lateral dividers, back panels, pull out shelves.

That means you can choose “ LIVING SPACE” not only to store documents and books!!

Exclusive features

In comparison with many competitors standards, "Living Space" is provided with exclusive characteristics, for best safety and resistance.

1. full lateral panels, 10/10 thickness: thanks to them you can store inside each type of books without using, as for open shelves, any dividers. Unlike warehouse shelves, books cannot fall from one side to the other!! With back panels, "Living Space" becomes a real filing cabinet on mobiles bays. High thickness of materials is one more proof of best solidity and, therefore, quality.

2. independent shelves, 10/10 thickness: for each mobile bay, you have a double order of shelves, with the possibility to create different spaces on the two sides; this ensures a more rational archiviatioin in comparison with most of warehouse shelves. High thickness avoid every shelf flection, even for heavy loads.

3. safety: for each " Living Space" unit, always available are the anti overturning system and safety bars, to avoid any accident.

DRAWING HOLDERS

Horizontal drawing holders fits perfectly for each type of drawing, thanks to its special inner dividers.

Available are different types of models, from 5 to 10 drawers, with possibility.

All the drawers are running on soft guides and are provided of handle in plastic and label holders.

Closing system with lock.

Possibility to choose even the vertical drawing holders with a total capacity, according to different formats, off 1000-2000 laid sheets.

They represent the most suitable solution for managing, classifying and protecting drawings from dust and light without limiting the sheet format and allowing operators to have everything in view and close at hands.

Available even with anti tipping mechanism.

GARRETS AND BALCONIES

Habitat Italiana plan, manufacture and provide with the installation of balconies and metal structures for warehouses, offices and archives. This systems moreover are purposely predisposed talso for installation of all our shelvings system, both fixed and mobile, and are fitted with accessories and equipments (ladders, parapets, bands of protection) to answer to the strictiest security normatives.

All the structures are custom made by our technicl dept. and guarantee the maximum load and capacity (with an appropriate certification) for an intensive exploitation of the spaces.
